Collection of vero (stripboard) & tagboard layouts for 100s of popular guitar effects, so check that site out for great discussions on building your own effect pedals.

Update, 22.3.2015 **There were couple minor issues with the schematic. pedalSHIELD is an Open-Hardware / Open-Source Arduino guitar pedal shield. It is designed The components to build this Arduino guitar pedal are all through hole and easy-to-find parts. You can Picture of Closer Look to the Schematic.

There are 85 circuit schematics available in this category. I just started this project to build this 12au7 preamp OD pedal I found on instructables and can't seem to figure out the Tube pins. The diagram shows 4 tube.

The Roberto-Venn Guitar Pedal teaches you how to build guitar distortion We will teach you how to breadboard a simple distortion pedal to work out the bugs.
This simple four-channel/mono output circuit will fit in a stomp box size enclosure and is perfect for your pedal board to mix parallel effects. Mini Mixer Schematic · Mini Mixer Parts Layout and Wiring Diagram · Mini Mixer Ready-For-Transfer.

Distortion Pedals generally. The parts list and schematic diagram for this project can be found at Very simple and cheap Guitar/Bass distortion pedals. Effects can be housed in effects pedals, guitar amplifiers, guitar amplifier simple DSPs use multiple feedback delay circuits to create a large, decaying series. A pedal chain of all true-bypass guitar pedals is not always the best thing. Using a low-gain JFET transistor, Jack Orman's design is as simple as it gets. Get one of the IC boards, part #276-159B and follow the wiring diagram from below. Once I realized how simple they were to build, I couldn't resist trying to build one. As far as guitar pedals go, loopers are probably the easiest of all pedals to build. Below is a completely unoriginal schematic I drew based on other designs. I will also sometimes move stuff around to fit a specific pedal (for instance if moving since I started getting requests for diagrams of the basic true bypass wiring styles. For basic true bypass wiring, you'll need a DPDT (double pole, double throw) switch. It's like when you
Guitar effects pedals are generally composed of several simple analog circuits. The gist of the Fuzz Face remains in the simple circuit that uses eleven transistors. For a simple project, we recommend the NPN Silicon Transistor Version. See the Charge Pump Wrapper below to get your positive ground pedal on a common layout. Both have a 10k trimmer (R5T) that is not shown in the schematic.
